

Cairo University Hospital - Pulmonary Function Laboratory

PULMONARY FUNCTION TEST REPORT (MOCK / SAMPLE DATA - NOT A REAL PATIENT)

Patient Name:	Mona Ahmed Farouk	Patient ID:	MRN-2026-08841
Test Date:	22-Aug-2026	Age / Sex:	58 / Female
Height:	162 cm	Weight:	68 kg
Referring Physician:	Dr. Hassan El-Sayed	Indication:	Pre-treatment assessment, NSCLC

SPIROMETRY

Parameter	Predicted	Measured (Pre)	% Predicted
FVC (L)	3.10	2.55	82%
FEV1 (L)	2.45	1.86	76%
FEV1/FVC (%)	79%	73%	-
PEF (L/s)	6.20	4.75	77%

DIFFUSION CAPACITY (TLCO)

Parameter	Predicted	Measured	% Predicted
TLCO (mL/min/mmHg)	22.1	16.8	76%
KCO	4.85	4.20	87%

INTERPRETATION

Mild restrictive ventilatory pattern with mildly reduced diffusion capacity (TLCO 76% predicted). FEV1 76% predicted and TLCO 76% predicted are both above the 30% threshold of concern for treatment-related respiratory complications. Findings do not preclude consideration of treatment with curative intent, though further functional assessment (e.g. shuttle walk test) may be considered given borderline-moderate risk of postoperative dyspnoea.
